THE SYSTEM

CLAUDE × TRADINGVIEW OS

Connect → Scan → Analyze → Decide → Monitor

by @seb.ai

Read this first — the honest truth about the setup: TradingView does NOT have an official public API for pulling chart data into other apps, and there's no official TradingView MCP. So this guide uses the connections that actually work and are allowed: (1) **alert webhooks** to send signals out, (2) **screenshots + pasted data** for Claude to analyze, and (3) **Claude writing Pine Script** for you. Anyone promising a magic "Claude reads your live TradingView charts automatically" is selling you something. This is an analysis and workflow system — not financial advice, and no setup guarantees profits. Paper trade everything first.

🔌 CONNECT — What Actually Connects to What

Here's the real map of how Claude and TradingView talk to each other:

Connection	Direction	What it does	Cost
Screenshot → Claude	TV → Claude	Paste a chart image, Claude reads structure/levels	Free
Export data → Claude	TV → Claude	Export OHLCV/CSV, Claude analyzes numbers	Free
Alert webhooks	TV → your system	TV fires a signal to a URL you control	Paid TV plan
Claude writes Pine Script	Claude → TV	Claude codes your indicator/strategy, you paste it in	Free

The webhook flow (the one real automation) looks like this:

TradingView alert fires → webhook POST → your endpoint (n8n / Make / a script) → logs it or pings Claude →

`Claude analyzes → YOU decide`

Optional pieces: for live market DATA (not TradingView's), Claude Code can use free market data via tools like Alpha Vantage or yfinance so you can pull numbers without scraping TradingView. Some community "TradingView MCP" servers exist but are unofficial and may break or violate ToS — use with caution.

📁 Folder Structure

```
tv-analyst/
├── CLAUDE.md ← master prompt + your rules + your setups
├── charts/ ← screenshots you drop in for analysis
├── data/ ← exported CSV/OHLCV files
├── pine/ ← Pine Script Claude writes for you
│   └── my-strategy.pine
├── watchlist.md ← tickers + trigger levels
├── journal/ ← daily analysis + trade reviews
│   └── 2026-08-04.md
└── webhooks/

    └── alerts-log.md ← where fired alerts get recorded
```

Put your strategy rules and the Master Prompt in CLAUDE.md — now every session, Claude already knows your setups and analyzes charts against YOUR rules, not generic advice.

🔍 SCAN — Multi-Chart Monitoring

The realistic monitoring loop (you drive, Claude analyzes):
☐ Set your TradingView watchlist + alerts on key levels (TV does the watching)
☐ When an alert fires or you spot something, screenshot the chart
☐ Drop 1–5 screenshots into charts/ and run the multi-chart prompt (#5)
☐ Claude ranks them against your setups and flags the cleanest one
☐ Survivors get a full analysis (next section)
Why not more? Claude analyzes what you show it — it can't watch 40 live charts. The edge is having ONE consistent analyst apply your rules the same way every time, not infinite coverage.

🧠 ANALYZE — Chart Analysis Workflow

The 4-step read — run every chart through this (prompt #6 automates it):

Step	What Claude looks at
1. Structure	Trend direction, higher-highs/lower-lows, the bigger picture

2. Levels	Support, resistance, recent swing points
3. Setup match	Does this match one of MY written setups — or none?
4. Invalidation	Where would this idea be proven wrong?

Honest limit: Claude reads a static image — it can be wrong about exact prices or fine detail. Treat its read as a second opinion that must agree with what YOU see, never as ground truth. Always confirm levels on the actual chart.

📐 Breakout, Support, Resistance & Trend Prompts

Breakout: "Here's a chart of [ticker]: [screenshot]. Is this a valid breakout setup per my rules [paste]? Identify the breakout level, what confirms it (volume/close), and where it's invalidated. No prediction — just the setup read."

Support/Resistance: "Mark the 3 most important support and resistance levels on this chart: [screenshot]. For each, tell me how many times it's been tested and how I'd confirm it holds or breaks."

Trend: "Describe the trend across these 3 timeframes: [screenshots]. Are they aligned or conflicting? What does my strategy say to do when they conflict [paste rules]?"

🛡️ DECIDE — Risk Management Prompts

Position size: "Account [$X], risk 1%, entry [$A], stop [$B]. Calculate my share/contract size and show the math."

Trade plan: "Build a full trade plan from this setup: [screenshot + details]. Entry trigger, stop at invalidation, 2R target, size at 1% risk. Flag if risk:reward is under 1:2."

Reality check: "Talk me out of this trade: [idea]. What's the strongest bear case and the 3 ways it fails?"

Non-negotiables to keep in CLAUDE.md: max 1% risk per trade, stop at invalidation only (never widened), min 1:2 R:R, max 3 open positions, paper trade any new setup 30+ times first.

🔔 MONITOR — Alert Workflows

Setting the alert (in TradingView):
☐ Right-click your level → Add Alert → set the condition
☐ Under Notifications, enable **Webhook URL** (requires a paid TV plan) and paste your endpoint
☐ In the alert message box, write JSON Claude can parse, e.g.:
{"ticker":"{{ticker}}","price":"{{close}}","setup":"breakout"}
What receives it: a no-code tool like **n8n** or **Make.com** catches the webhook, logs it to alerts-log.md, and can forward it to Claude for an instant re-check against your rules (prompt #16). Then it pings your phone. **You still place every trade manually** — the webhook alerts and analyzes; it doesn't execute.

📊 Trade Review Workflow

After every trade, screenshot the chart with your entry/exit marked and run prompt #18. Log to journal/: setup, result in R, did-I-follow-the-plan, one lesson. Weekly, Claude reads the journal and finds your patterns (prompt #19). This review loop is where the actual edge compounds — not in any single chart read.

💬 20 Copy-and-Paste Prompts

Connect / Setup

1. "Write Pine Script v6 for this strategy: [rules]. Include alert conditions I can wire to a webhook, plus strategy-tester code with commissions and slippage."
2. "Convert this TradingView alert into clean JSON for a webhook that includes ticker, price, timeframe, and setup name."
3. "Set up my CLAUDE.md for chart analysis: here are my setups and risk rules [paste]. Structure it so you apply them to every chart I send."
4. "Explain step by step how to connect a TradingView alert to n8n and log it to a file — I'm a beginner."

Scan / Analyze

5. "Here are [N] chart screenshots: [paste]. Rank them by how well each matches my setups [paste]. Best opportunity first, with one-line reasons."
6. "Analyze this chart in 4 steps — structure, key levels, setup match, invalidation: [screenshot + my rules]."
7. "Here's OHLCV data for [ticker]: [paste CSV]. Identify the trend, recent support/resistance, and any setup forming. Use only the data given."
8. "Compare what price is doing on the daily vs the 1-hour: [2 screenshots]. Aligned or conflicting?"

Levels / Setups

9. "Mark the 3 strongest support and 3 strongest resistance levels on this chart and rate each by number of tests: [screenshot]."
10. "Is this a real breakout or a fakeout risk? What would confirm vs invalidate it: [screenshot + rules]?"
11. "Score this setup 1–10 against my checklist [paste] and tell me the single biggest reason to skip it: [screenshot]."
12. "Where's the highest-probability entry, stop, and target on this chart per my strategy [rules]: [screenshot]? Present as a plan, not a prediction."

Decide / Risk

13. "Position size: account [$X], 1% risk, entry [$A], stop [$B]. Show the math."
14. "Build a full trade plan from this setup and flag it if risk:reward is under 1:2: [details]."
15. "Steelman the bear case against this long and give me the earliest warning signs it's failing: [idea]."

Monitor / Review

16. "An alert just fired: [paste webhook JSON]. Re-check this setup against my rules [paste] and the calendar — still valid, or did conditions change?"
17. "Here's my watchlist with trigger levels [paste]. Which are closest to triggering and what should I have ready?"
18. "Review this closed trade: [screenshot with entry/exit + my plan]. Did I follow the plan? What's the one lesson?"
19. "Read my journal from this week [paste]. What setups, times, or behaviors correlate with my wins vs losses?"

20. "Am I ready for real money? Judge my paper record [stats] against: 30+ trades, positive expectancy, 90%+ plan adherence. Be brutal."

🎛️ THE MASTER PROMPT

"You are my TradingView Analyst. I send you chart screenshots and data; you analyze them against MY rules and help me decide — you never decide for me.

My setups: [paste]. My risk rules: max 1% per trade, stop at invalidation only, min 1:2 risk:reward, max 3 positions, paper trade new setups 30+ times first.

Your jobs: (1) Read every chart in 4 steps — structure, levels, setup match, invalidation. (2) Score setups only against MY rules, not generic TA opinions. (3) Size positions from stop distance and show the math. (4) When an alert JSON comes in, re-check the setup and the calendar. (5) On closed trades, grade my plan-adherence and log one lesson.

Hard limits: Never predict prices. Never say buy/sell/hold — give the analysis and what MY rules dictate. You're reading a static image or the data I paste, so state your confidence and tell me to confirm exact levels on the live chart. Never invent price data. Remind me: paper trade first, this isn't financial advice, and no analysis guarantees profits.

Start by asking for my setups, risk rules, account size, and the first chart."

⚡ THE 15-MINUTE SETUP

Minutes 0–3: Install Claude Code. Make a folder tv-analyst, open it, run claude. Paste the Master Prompt and say "set up my folder structure from this."
Minutes 3–7: Fill your CLAUDE.md — tell Claude your 2–3 setups and your risk rules (use prompt #3). Now it knows your system.
Minutes 7–11: Test the analysis loop — screenshot any chart in TradingView, drop it in charts/, run prompt #6. Confirm the read matches what you see.
Minutes 11–15: (Optional automation) On a paid TV plan, add one alert with a webhook pointing to a free n8n/Make workflow that logs to alerts-log.md. No paid plan? Skip it — the screenshot workflow works great manually.
Daily habit: screenshot → analyze → plan → (paper) trade → journal. **Weekly:** run the review prompt (#19) and update your setups.

You made it to the end 👊
